

ihiji Intros APP-2000 Secure Appliance

Written by Marco Attard
01. 04. 2015

ihiji launches the APP-2000-- a network management appliance providing secure, centralised access to integrator client networks when coupled with the ihiji invasion cloud-based network management service.

It provides installers to check the performance and health of customers' networks and devices, as well as alerts for the avoidance of potential device or network failure based on predetermined thresholds.

The APP-2000 ships from April 2015.
