Anuva Automation adds Works with Nest integration to TiO (Turn it On) 2.0, together with Bluetooth performance improvements, TiO Pro login updates and an upgrade to the MasterCoordinator (MC2) system coordinator.

“We’re excited for the opportunity to work with Nest,” Anuva says. “With our new Works with Nest integration, our dealers can now provide intuitive access and control of the popular Nest thermostat through the award-winning wired, wireless and app-based user interfaces from TiO – offering a truly integrated solution to their customers.

The MC2 upgrade adds a bigger processor, more memory, faster speed and greatest wireless range, the company says. Further additions to the home automation platform include "Action Groups," a means for installers to empower lighting components used in commercial applications such as restaurants, bars and offices.

TiO 2.0 requires the MC2 unit for customers to take full advantage of the update, and as such Anuva will be soon offering a swap program for MC1 owners.
