Smart energy company Geo launches the third version of the Cosy home heating system-- an update featuring a twin zone heating system making use of a second Cosy display paired with the system.

The second display acts as a thermostat for the second zone. Another addition is hot water control, with an extension pack allowing customers switch hot water on/off via either Cosy display or mobile device (iOS or Android) app.

“We are very excited about the new functionality that Cosy 3 offers,” Geo says. “Customers will be able to make highly effective changes to their homes, including no longer having the heating on when there is no need to.”

The updated Cosy smart thermostat is available now in both single or twin zone installation options.
