Autonomic announces the Mirage Audio System (MAS) is now compatible with the ELAN platform via add-on module for the M-800 and M-400 Mirage digital amplifiers.

Thus, Autonomic hopes ELAN integrators will be able to offer customers whole-home entertainment solutions. The MAS already features access to all popular music streaming services while being able to push high-resolution audio to up to 16 zones.

The module also allows the routing of any source to any zone and the control volume/bass/treble/balance within each zone.

Users can connect to the Mirage Media Server (MMS) or MAS via the ELAN control environment for iOS and Android. One can browse through content by album, artist, title or favourites, create custom playlists and take advantage of TuneBridge, an Autonomic-exclusive feature allowing users to tailor programming selections according to their tastes.

"Integration with ELAN is another opportunity for Autonomic to support the custom installation community with the finest whole-house entertainment solutions," the company says. "Making our Mirage Audio System compatible with this popular control platform brings critical profit opportunity and enhanced efficiency to integrators."
