ABB announces the ABB-free@homeTouch 4.3-inch-- an ultra-compact touchscreen controller designed for use with the ABB-free@home home automation system.

The touchscreen has a mounting height of just 8mm, making it more versatile for installers with little room to play with than the company's larger 7-inch touchscreen, whose mounting height is of 29mm. It features a capacitive display with a continuous glass surface but, unlike the 7-inch version, lacks IP30 certification.

The 4.3-inch touchscreen is otherwise functionally identical to its larger sibling, with 16 configurable functions, heating, lighting, blinds or curtain control and integrated room temperature controller. It is available now.
