Logitech announces an Apple HomeKit upgrade for the Pop Smart Button-- allowing users to control more devices and any number of home automation scenes with the press of a button.

The Pop buttons feature 3 control gestures, and connect to devices via bridge device able to pair with an "unlimited" number of buttons. As for HomeKit, one simply needs to pair the bridge with the Apple Home app before configuring required scenes. The company adds Pop buttons are compatible with non-HomeKit devices, such as Sonos wireless music systems, Osram lighting, Hunter Douglas and Lutron blinds, and more via companion Pop app.

“Today’s smart home is about bridging simplicity with a more shared experience,” Logitech says. “We are passionate about enabling customers to get the most versatility and entertainment within their connected homes. Adding Apple HomeKit to POP allows us to provide even more ways to simplify access to your HomeKit-enabled home for the entire family to enjoy.”
