Chamberlain launches the MyQ Home Bridge-- a means to add HomeKit compatibility to any MyQ garage door opener (without built-in wifi) and lighting products.

Announced back at CES 2017, the MyQ Home Bridge allows customers to control garage doors with Siri, set scenes within the Home app and connect a MyQ garage door opener with other HomeKit-enabled devices. Thus, one can have a smart thermostat or light bulb adjust accordingly whenever the garage door opens or close.

The company also offers a series of MyQ lighting accessories users can connect to HomeKit for control via iPhone, iPad, iPod touch or Apple Watch.

"Never worry again if your garage door is left open," Chamberlain says. "Plus, this product is compatible with Apple HomeKit and Siri Voice Control. If you are an existing MyQ user with an Apple device, upgrade your garage door opener and MyQ lights with HomeKit to make your smart garage even smarter."

The MyQ Home Bridge is still to get an actual release date.
