Key Digital adds 4 Lutron systems to the Compass Control Partner Alliance program-- Caséta, HomeWorks, HomeWorks QS and RadioRa2, all available as bi-direction drivers and modules.

Compass Control is a fully integrated control system built for iOS and Android. It offers modular programming or custom design, and the Partner Alliance program allows installers to instantly integrated pre-configured GUI templates, cutting down on programming time.

The Lutron systems included with the Compass Control bi-directional modules allow the control of lighting, shade and thermostats via smart device. The Caséta Wireless Dimmer provides control of lights, shades and temperature settings, while the HomeWorks system handles lighting and shades, together with security and AV systems.

HomeWorks QS integrates control of all lighting, interior and exterior, electric and daylight, together with AV and HVAC control for broader environmental control. Finally RadioRa2 is an energy-saving system allowing one to adjust the amount of daylight and electric light (using light controls and automated shades) as well as temperature in a single room or throughout an entire home.
