French home automation specialist Somfy presents the Huna motorised roller blind system, with a range of design options, intuitive installation and easy operation via app or wireless wall switch.

The system pairs with Somfy home automation, and is designed to add "extra smarts and style" to the home. It is available in a wide range of colours, finishes and sizes, and offers insights and command through a smartphone app. Customers even get the option to add a light sensor, meaning the blinds can react to and manage the amount of light entering the room.

In total, Huna blinds come in 150 different configurations ranging from a titanium cassette profile to a sand-coloured fabric. A configuration tool on the Huna website allows customers to adapt blinds according to their specifications and tastes. Installation promises to be wire-free and simple, with no separate hub required, and the included battery lasts for up to 3 years. As mentioned earlier control comes through either app or wireless wall switch.
