Crestron's TPMC V-Panel combines touchscreen and graphics engine in a slim (2"), widescreen design ideal for intuitive automated system control.

It offers rich colour graphics, 3D GUI animations and gestures navigation in either 12" or 15" models.

Features include streaming HD video, web browsing, embedded apps, onscreen annotation and 2-way VoIP intercom.

The touchscreen panel carries Crestron's Core 3 OS. The open architecture OS supports multiple formats including Flash, HTML 5 and H.264 video.
