URC announces the integration of the Total Control 2.0 whole-home automation and control system with the HEOS wireless music system through a module allowing for two-way control of HEOS products on a local network.

"Consumers and dealers love the new HEOS interface," URC says. "The rich Total Control 2.0 graphics paired with the overall speed and performance of the module are really impressing people, and we couldn't be more excited to bring it to market."

The URC-HEOS two-way module features now playing control of HEOS devices, with browsing of specified built-in music services and volume control of HEOS devices. It also provides simple volume punch-through to and from any HEOS device. The module supports all HEOS products, and is supported on Total Control 2.0 systems.

In further URC integrations, Yamaha offers a Total Control 2.0 driver adding two-way control and MusicCast multi-room audio compatibility to over 50 Yamaha home audio products. Products compatible with the driver include Avenage and RX-V series AVRs, soundbars, wireless streaming amps, wireless speakers and hifi receivers, as well as the Yamaha Quad Streamer (XDA-QS5400RK).

"The new URC driver significantly expands the flexibility and range of solutions available to custom integrators with Yamaha home audio products," the company says. "Our MusicCast line unites state-of-the-art home entertainment with high-performance multi-room audio, and now it can all be easily controlled as part of the leading URC whole-home automation system."
