RTI announces the KA8 and KA11-- tabletop/wall-mounted touchpanels for intuitive control of electronic systems in both residential and commercial applications customers can set up in either landscape or portrait modes.

The touchpanels combine widescreen LCD displays with integrated capacitive touchscreens and fast touch response and gesture control. The KA11 is the larger option with an 11.6-inch 1920 x 1080 resolution display, while the 8-inch KA8 handles WXGA (1280 x 800) resolution. Both feature an edge-to-edge glass design, and are wall-mountable via standard dual-gang electrical box.

The design also allows customers to mount the touchpanels on a table surface using an accessory stand. Built-in ethernet with PoE and dual-band wifi enable video from IP security cameras, enhanced 2-way feedback and remote programming updates.

"RTI offers a wide range of touchpanel controllers to give our dealers the flexibility to meet the budget and installation requirements in their projects," the company says. "Our new KA touchpanels offer the customisation, sleek design, and innovative installation options that will make them a great addition to any project."
