Energy Optimisers (EOL) launches a Zigbee Smart Energy version of its Plogg plug-in electricity meter.

The Plogg is a smart meter and data logger. It carries Ember's EM357 ZigBee wireless technology and runs on a Telegensis module.

Users attach it to any electrical appliance where it stores electricity data and wirelessly transmits information through ethernet gateway.

Through the system-on-chip tranceiver and EmberZNet networking software (with Smart Energy cluster libraries) a network of Ploggs can operate with other 3rd party ZigBee SE compliant devices. 7
