At ISE 2020 URC launches a two-way IP module for the integration of the Total Control home automation system with August Smart Lock and Smart Lock Pro door locks.

Available for authorised installers via the URC dealer portal, the module allows customers to control and view the status of compatible August Smart Locks door locks via the Total Control system, using any URC touchscreen or smartphone app. Total Control 2.0 features premium performance, customisable GUIs and robust 3rd party integration, making it ideal for both residential and commercial applications.

“We are continuing to expand our ecosystem of compatible products with our Total Control smart automation system, and August Locks provide an easy and elegant solution for custom installers, since the product attaches to the existing deadbolt, so consumers don’t have to change their keys,” URC says.
