Savant adds language capabilities to the Savant Pro App, including Portuguese, Russian and Swedish. The announcement follows the addition of Spanish and Chinese language support, and provides more localisation options for installers.

Language localisation is available in the iOS version of the Savant Pro app. It enhances both the intuitiveness of the app navigation experience and user creation of Savant Scenes, timers and event notifications. Further features include integrated energy automation with more Energy modes, circadian lighting automation with Daylight Mode, on-screen control with the Savant Home app for Apple TV and the ergonomically redesigned Pro Remote X2.

“Savant is committed to delivering the most intuitive, feature-rich smart home user experience to homeowners around the world,” the company says. “As we continue to add new features, we also continue to expand our global reach, and we want users to be able to experience and personalize the Savant Pro App in their native language.”

The aforementioned Savant Pro language options are globally available.
