Opus launches its 6 series at ISE 2011-- its latest take on its smart home control system.

The 6 series handles key technologies including Apple TV, blu-ray, iDevices, DAB/DAB+ streaming and internet radio-- together with lighting, heating, windows/blinds and CCTV control integration (including KNX devices).

The system's master control unit (MCU610) handles distribution from 14 sources to x6 main zones and x6 sub-zones (scaleable up to 36 / 36), while the VMX640 HD video matrix offers HD video output to up to x8 screens.

For control, Opus offers either its 6 series touchscreens or an app version for iDevices.
