GE Energy introduces HabiTEQ's home and building solutions portfolio to the European market-- a range of pre-wired distribution boards designed for modern electrical installations.

The HabiTEQ boards are "plug and play" for easy installation, meaning even a competent electrician get get an installation up and running. Installers can configure the system itself PC program and USB or ethernet ports, giving control via a choice of interfaces on all areas of automation, including security, lighting, climate automation and shutter/blind control.

The system also allows the addition of automation blocks for intelligent switches, detectors, displays and SMS/web interface devices. Installers can also link the HabiTEQ system with GE Energy's SVT-photovoltaic system, aligning consumption with generation.
