Key Digital launches **Compass Control**, a one-hour programmable control system that uses its Compass Navigator software, a step-by-step process led by simple 'drag and drop' gestures.

You program a system using an iOS 5 device and the Compass Control App for the iPad, iPhone or iPod touch.

The Compass Control base system consists of a KD-MC2500 Master Controller, with Compass Control App on Apple iPad running under KD-CSL License.

The KD-MC2500 Master Controller works as the CPU for the system and has eight IR (learning) or RS-232 ports and TCP/IP/LAN networking control support as well as two sets of switchable I/O contacts for relay control.
