AMX ships the Modero X Series Multi Preview Live (MXA-MPL)-- an accessory allowing the streaming real-time video and preview images to Modero X series touch panels.

It works in conjunction with either the Enova DVX Presentation Switcher or the Enova DGX Digital Media Switcher with up to 10 video sources.

The MXA-MPL accepts analog or digital video inputs over HDMI (converting them into a video stream) as well as displaying up to 10 preview snapshots (in .jpeg format) on a Modero X touch panel.

AMX also adds panel-to-panel video chat support to Modero X touch panels, together with NFC communications and an array of supported video and audio codecs.
