---

URC customers now can control their Complete Control home systems through the Control Mobile iOS app (MX-iOS), available for iPad, iPhone and iPod Touch.

The app uses local area IP networks and transforms iDevices into AV, home theatre and lighting controllers. The GUI is customisable, allowing installers to design control screens as per customer requirements and preferences.

Functions include DVR setup, channel switching, music control and URC Lighting, with a code base flexible enough to incorporate most AV components.

Installers can pair the free app with the URC MRX-1 Network Base Station through a setup card, with a one-time setup fee allowing the activation of unlimited iDevices on any home system.

For demonstration purposes dealers can also use the app to create custom programs on their iDevices and show off different functions, without having to connect an MRX-1 unit.
