Impact Acoustics' 6x2 Component Video Matrix Selector is a controller for HD and progressive scan video sources. This HDTV selector allows you to simultaneously route any of 6 source devices to 2 separate TV/monitors (or 1 source to 2 TV/monitors).

This switch offers 6 component video inputs, 6 stereo audio inputs, and 6 optical digital audio Toslink inputs. It will switch all of these inputs to either of the two outputs, with the audio following video.
