The ProPanel control app for iDevices from Pro Control is available for the ProLink.r control processor, providing users with home environment system control.

Also available for the ProLink.z, the ProPanel app integrates either ProLink processor with iPad, iPhone or iPod Touch to control AV systems, lights, music servers, shades, internet radio, door locks and more.

ProPanel supports local connection through wifi via the ProLink.r, while the ProLink.z offers remote-access via auto-switching wifi and 3G wireless.

App setup comes through an auto-programming feature-- allowing dealers to completely customise the GUI via Pro control software for a personalised control experience. Preprogrammed templates are also available, while all interface graphics are stored on ProLink processor, iDevice and the cloud.

The app is available for free from the iTunes App Store, but dealers need to purchase licenses from either distributors or online with Pro Control Studio software to enable communications with Pro Control systems.
