ISE 2013 is the 10th for Remote Technologies Inc. (RTI), one where company has a number of European product launches-- such as the Apex home control platform.

First seen at CEDIA Expo 2012, the Apex is a platform for the RTI control ecosystem. It supports remote programming and project management, allowing installers to service, update and maintain the system remotely via the cloud.

The system comes complete with multiple in-wall touchscreens, remote controllers, HDBaseT matrix switches, multi-room audio systems and a variety of automation drivers.

Most RTI handheld remotes also get a 3rd radio together with wifi and ZigBee-- 433MHz.

“It’s nice to have a choice, especially here in Europe,” Alexander Tempel from RTI distributor Vivateq says. “Behind the scenes there’s a lot of concrete and metal construction.”

Meanwhile RTI sister company Pro Control celebrates its first birthday by launching the ProLink.r controller and Pro24.r handheld remote, as well as the ProPanel companion iOS app.
