Remote Technologies Inc. (RTI) joins the KNX technology creator and owner KNX Association in a move to ensure tighter integration between RTI control solutions and KNX-compatible devices.

KNX is an international home and building control standard (ISO/IEC 14543-3) used in many sectors, including lighting and shading control, security and HVAC systems, audio/video and energy management. Over 7000 devices in 120 countries use of the KNX protocol.

Current RTI control systems integrate with KNX-compatible devices via 2-way driver from COMM-TEC group member Vivateq, RTI's European distribution partner. The driver works with Vivateq's CTG-KNX/IP gateway, with ethernet networks acting as communications link between KNX-compatible devices and RTI XP-series processors.

"We are excited to say we've taken the next step by becoming a KNX member," RTI says. "By becoming a member of the KNX Association, we're demonstrating the importance of having full control and 2-way communication with KNX-compatible devices, ensuring that RTI can provide dealers with effective control solutions in any residential or commercial project."
