Remote Technologies Incorporated (RTI) ships the 2nd generation T1-B remote control-- the T1-B+, an all-hard-button number promising customisable control inside a design ideal for all home and office needs.

The remote features 40 individually programmable backlit hard buttons, allowing one to control devices or execute multistep macros via Integration Designer software. The unit even offers 12 keypad buttons installers can outfit with custom keycaps for common control tasks (such as A/V source selection).

A new T1-B+ addition is RTI dual-RF platform, with support for 433MHz RF and 2.4GHz ZigBee for RF communications with RTI processors-- expanding functionality to include RS-232 control, contact closures, power sensing and more.

The unit also handles standalone IR control with 15-460kHz IR transmitting frequency.

An integrated tilt switch, lithium-ion battery and charging dock promise "long hours" of use and easy charging, while non-volatile flash memory stores system configurations.
