---

NuVo releases an AMX-certified driver for the integration of NuVo wireless audio systems with AMX automation solutions, allowing dealer set-up and providing customers with an easy-to-use interface.

According to NuVo driver installation involves no laborious programming, and allows users to select zones, navigate customers, adjust volume and more through AMX devices.

The driver is compatible with AMX NetLinx central controllers.

“Pursuing compatibility with automation partners and ensuring that integration is easy to implement is part of our commitment to both dealers and end-users to provide high-performing audio systems,” NuVo says. “This driver was developed in order to elevate the user-experience in projects where both NuVo and AMX systems are employed. The AMX certification of the software says we’ve accomplished that.”
