Crestron starts shipping the next generation V-Panel 20-inch HD Touchscreen Display (TDS-2020), a 1920x1080 ultra-thin displays customers can use as a control touchscreen, TV or PC monitor.

It combines capacitive touch technology with HD video, offering multi-video display of HDMI and other video sources with an ultra-wide 178-degree viewing angles.

Crestron says the display offers 3 times the contrast ratio of earlier V-Panel displays, while an included touch pen allows users to write over video images or sketch out ideas.

Mounting comes via articulating arm, VESA and lectern mounting options, and Crestron says a flush-mount wall bracket will be available soon.
