---

Key Digital launches a new Compass Control master controller-- the KD-MC1000, the first fully-integrated major control system from the company leveraging on the capabilities of iDevices such as the iPad and iPhone.

A smaller unit than the previous KD-MC25000, the KD-MC1000 features 8 control ports with 6 multi-function 3.5mm universal ports for RS-232, 1 relay port and 1 ZigBee port. RJ45 connectivity provides LAN-based control, while sensor and relay control, indicator LEDs and an IR learning window enable IR code learning.

To further increase control port options installers can integrate the KD-MC1000 with Key Digital Digital IQ and Champion series HDMI/HDBaseT matrix switchers. Bi-directional drivers from any Key Digital Compass Alliance Partners allow one to add residential control, including audio, video, HVAC, lighting, shades and security.
