---

Remote Technologies Incorporated (RTI) starts shipping the T2i, a sleek remote control featuring a colour touchscreen, dual-RF capability and a programmable interface at what RTI says is a "budget-friendly" price.

Within a thinner, sleeker form factor the remote includes an accelerometer (for rapid "instant-on" control), flush-mount 2.8-inch touchscreen and a cursor button. The 47-button keypad is backlit and features 4 buttons installers can interchange with either pre- or custom-engraved keycaps.

Wireless modes come in two flavours-- direct IR control and the RTI dual-RF platform supporting both 433MHz RF and 2.4GHz ZigBee.

"Integrators and consumers alike will be pleased with the performance and value this new controller offers," RTI says. "For installers, it's simple to customize the GUI and hard buttons to match the needs of their customers, providing the flexibility to incorporate the T2i into any installation. For end users, the advanced ergonomics, color touchscreen, two-way control capabilities, and affordable price point make it a very attractive option."
