

iRoom announces the ISE 2015 launch of the iBezel, a next-generation motorized in-wall iPad dock from the company featuring an integrated keypad for quick access to home automation functions.

The keypad is independently programmable and incorporated in the glass bezel. It provides customers with easy access to favourite controls for lighting, audio, video, home security, HVAC and more, without need to "wake up" the tablet and navigate to the specific control app.

Also on show at ISE 2015 is the uniDock, the iRoom universal, cordless, in-wall charging station handling power over Lighting, USB and micro-USB connectors.
