RTI's Pro Control sets to highlight its latest additions at ISE 2015, including programmable remote control system enhancements and drivers offering two-way programming for home automation and multimedia devices.

The new drivers are compatible with the drag-and-drop Pro Control Studio programming software, and include drivers for Sonos devices (simplifies the control and feedback of Sonos audio components for selecting songs, storing favourites and adjusting audio settings on up to 16 media players), Nest thermostats and the Nest Protect (allow full control and feedback of the popular devices), Anthem receivers, projectors from Sony, JVC and Epson, and Wirepath IP cameras.

Also on demonstrated at ISE is a two-way control and feedback system combining the Pro Control ProLink.z control processor (features an integrated 2.4GHz ZigBee antenna, ethernet and two RS232 2-way ports) and the Pro24.z touchscreen controller (features 2.4-inch LCD touchscreen, programmable 5-way joystick and backlit hard buttons).

A final Pro Control offering this the Pro.rfz wireless range extender-- a means to bolster the wireless range between the Pro24.z controller and the ProLink.z processor.

"At ISE 2015, we are excited to highlight our line of Pro Control solutions and demonstrate how they can provide powerful control for the end-user and simple, efficient programming for professional integrators," the company says. "With the introduction of our latest control products and automation capabilities, our company continues to expand the portfolio of solutions designed to meet the needs of residential and commercial customers."
