Control4 announces a line of HDCP 2.2-compliant 4K/UHD audio and video matrices for home automation installations, providing means to distribute 4K content to every room with no need for additional hardware or software.

The switches are available in 10x10, 8x8 and 6x6 configurations. All feature a sleek receiver powered by a single cable, eliminating extra equipment or wiring. An integrated audio matrix switch extracts audio from HDMI inputs and delivers audio to up to 8 zones.

Also included is advanced device management for more responsive switching between video sources.

“We are committed to delivering on the promise of 4K by offering compelling video distribution solutions to homeowners who expect the very best in entertainment,” the company says. “Our recent acquisition of Leaf, the Australia-based provider of audio/video distribution products, helped us get to market faster with a comprehensive media distribution solution that is truly 4K-ready today.”
