Bryston brings out the BR2 multifunction remote control, designed to give consumers control of the Bryston BCD-1 CD player, the Bryston BDA-1 outboard DAC, as well as Bryston's integrated amplifiers and preamplifiers.

"We had been in the process of designing an elegant remote just for the BDA-1 outboard DAC, when we realized that many consumers who purchase the DAC are likely to own other Bryston components," reports Bryston Sales VP James Tanner. "It was our goal to embed control functions of our other products into the BR2, creating one elegant solution that provides both control and convenience from a single device." The BR2 is made from milled aluminum, is available in either black or silver.
