Autonomic launches the KP-6-- a decora-style in-wall keypad providing instant access to the basic features of the Mirage Audio System without need to open a mobile device app.

The KP-6 features fingertip control of power on/off, volume, source and track-skip, as well as 4 user-programmable preset buttons. Users need to first curate content on the Mirage Media Controller app (iOS/Android) before pressing and holding to store the programming as a preset, with presents being anything from Pandora or SiriusXM radio stations to a playlist or favourite album.

Out of the box or presents remain the same from zone to zone, and installers can further customise keypad zones and preset groups via Autonomic web configuration page to provide customers with up to 4 unique presets for each zone of desired.

Integration requires a single cat-5 cable, with the single connection accomodating a built-in IR repeater for control of external devices.

Autonomic adds the multi-room Mirage Digital Amplifiers accommodate 32 (M-800) or 16 (M-400) keypads in any room as desired, while the KP-6 keypad is also compatible with Lutron Designer Solutions residential wall plates.

The KP-6 is shipping now.
