URC announces the TKP-5500-- an in-wall touchscreen for the company's Total Control smart home automation system featuring a high resolution 5-inch colour touchscreen.

Compatible with all URC TC Advanced Network Controller models (MRX-8/10/20), the TKP-5500 is mountable in either portrait or landscape modes in a standard single-gang wall box. It handles all Total Control features, including IP cameras, 3rd party devices (2-way), Z-Wave control, SNP-2, timers, events, rooms menu (can switch the controlled room) and room linking for URC DMS products.

The company adds the TKP-5500 is designed to be always on and ready for use, with the screen able to react faster-than-ever to select and control lighting, music, weather and more.
