URC announces HomeSet-- a streamlined control system optimised for the home security solutions channel built from the ground up with new technology, new hardware and new software.

The system consists of the C100 HomeSet automation hub and the optional R100 remote control. It integrates with Z-Wave devices, Nest, Sonos and many other popular devices, and can control up to 8 rooms. Cloud-based programming and maintenance allowing compatibility with other cloud-based systems.

A companion HomeSet app launches of up to 8 embedded apps, and is compatible with control apps from major security and alarm panel vendors. An online portal provides configuration and guided setup from any device with an internet browser.

“Security installation companies are challenged by competition from large non-traditional security providers,” URC says. “HomeSet offers a way for them to diversify their business model easily and sensibly. Control of home entertainment pieces like TVs, Blu-ray, audio equipment and soundbars-- plus lighting, door locks, thermostats and more-- keeps the homeowner active and engaged, and much less likely to ever surrender the integrated system.”

HomeSet products are available now.
