URC announces a pair of user interfaces for the Total Control system aimed at the custom installation channel-- the TDC-7100 tabletop controller and the TKP-7600 in-wall touchscreen.

The two devices feature a 7-inch touchscreen for the control of home entertainment and smart home products, as well as an intercom with door station integration through the addition of a built-in camera, microphone and speaker. Such functionality also enables room-to-room and whole house family communication.

In addition the TDC-7100 features an integrated induction charging base.

“We are excited to debut our new user interfaces that are designed to elevate the home control experience and provide intuitive door station integration,” the company says. “We are bringing these premium controllers to the custom channel for a price that makes elegant touch control a reality for more people. With both tabletop and in-wall options, we’ve empowered URC Dealers to give their customers choice in smart home control and convenience.”

Both TDC-7100 and TKP-7600 are available from November 2016.
