Crestron announces a first portrait touchscreen-- the TSW-560P, a model featuring clean, contemporary design complete with edge-to-edge glass.

Part of a new generation of TSW touchscreens, the TSW-560P allows control of audio, video, lighting, shades, HVAC, security and other systems. Like other Crestron touchscreens it is fully customisable with easy to use controls and icons, true feedback and real-time status display, live streaming video, voice recognition, web browser and media player.

Also included in the TSW-560P are 5 backlit, soft-touch capacitive buttons for quick access to commonly used functions. Another feature is a built-in light sensor for the regulation of display and button backlight brightness. It also runs the Sonos app, enabling enhanced Sonos audio system control.

Installation should be easy via included TSW-UMB60 universal mounting bracket. Another addition is an option security latch for applications where the physical security of the touchscreen is important.
