A solution to the 'interim inconvenience' surrounding **Kaleidescape's Blu-Ray importer/players** is revealed at CEDIA Expo 2010. While the M500 and M300 copy discs to a Kaleidescape server, copy control agreements dictate playback from server is only enabled if **the actual disc is present in the player's disc tray**.

The Vault **eliminates the need for disc handling**. Housing up to 100 Blu-Rays it switches and verifies between discs whenever required. Once connected to a player the vault also rips and imports movies to the server.

Customers can connect multiple vaults to house large collections.

This neatly bypasses Kaleidescape's legal struggles surrounding DVD/Blu-Ray ripping. The company was sued in 2004 by the DVD CCA for breach of contract.

Kaledescope also hosts a seminar at CEDIA 2010, "Why Innovators Get Sued by the Hollywood Cartel" on why the Vault was needed in the first place.
