Wall-Smart announces a partnership with Atlona offering flush mounts allowing installers to integrate Atlona Velocity touchpanels in new construction, retrofit and solid surface installations.

The New Construction Flush mounts for Atlona Velocity AT-VTP-550 5.5-inch and AT-VTP-800 8inch touchpanels integrate into any wall for unobtrusive installations preserving the room decor. They can also be painted any colour to truly appear to be part of the wall.

Meanwhile the retrofit mounts for Velocity touchpanels allow upgraders from older touchpanels, without need to do any drywall or paintwork. The mounted touchpanel remains accessible for service and maintenance. Finally, the flush mounts for solid surfaces allow flush installation in solid wood, marble, metal and other solid boards.

"Wall-Smart's expert approach seamlessly blends functionality and aesthetic design, helping systems integrators worldwide maintain architectural beauty throughout end user facilities without added costs or labor," Atlona says. "These are the exact benefits we aim to equip our partners with as they deploy our Velocity networked AV control platform across expansive, enterprise-wide projects."
