The BD-A1000 is Yamaha's first blu-ray player. It supports not only standard formats, but also SACD and DVD-Audio.

The company says the player is designed for premium audio quality and takes advantage of high end audio setups.

It does blu-ray 3D and 2D playback, with x.v colour and deep colour support, and up-scales DVD content up to 1080p. An ethernet port allows audio/video streaming from PC or NAS.

The remote (included) puts all Yamaha Aventure devices (like the RX-A3000) under one controller-- so users can fire up the receiver and player simultaneously.
