Extron announces the TLP Pro 525T TouchLink Pro-- a first 5-inch tabletop model from the company, featuring a high-performance quad-core processor, x8 more memory and an 800x480 capacitive touchscreen.

The display comes equipped with scratch- and smudge-resistant Corning Gorilla Glass, all within a distinctive enclosure with a sleek, sweeping back. Power over Ethernet allows it to receive both power and communications over a single ethernet cable, and the design makes it ideal for any environment requiring a tabletop touchpanel with a fully-customisable interface.

Customers can customise TouchLink Pro touchpanels using Extron GUI Designer software. The powerful interface design software offers ready-to-use templates for a wide variety of rooms and presentation environments. The designs can be used as is, or customise for the application by simply changing individual graphic elements.

The TLP Pro 525T is shipping now.
