URC's KP-4000 URC's latest hard-wired in-wall IP controller.

It is touch-screen based and controls any device on an IP home network, from personal servers to energy monitoring devices and media players-- via preprogrammed modules. Network connection is via eithernet or wifi.

The KP-4000 combines with the MRX-1 network wireless controller to provide 2-way RS-232 and IR over IP control. In addition it also allows display and control of FM and satellite radio stations right on the remote's LCD screen.
