---

Call it a Kaleidescape-for-All as Kaleidescape launches Cinema One, an out-of-the-box DVD movie server that provides instant viewing and management of your customer's movie collection.

This is the company's first system priced below £4200 MSRP, as Cinema One hopes to bring the Kaleidescape experience to a broader set of customers.

Cinema One is a single component movie server capable of storing 225 DVDS or 2500 CDs - but installs as easily as an ordinary DVD player. Linus Wong, Director, Product Marketing at Kaleidescape tells us Cinema One is based on and replaces the Kaleidescape Mini System.

It's ideal for the retail market, in his opinion, because it eliminates the need for storage configuration.

But there's more to this story than widening the market and price point (although scaling technology down to a 40-50% reduction is impressive).

Cinema One creates a new market by meeting the needs of parents with young children by automatically switching to a simplified user interface when the Child Remote is used.

[Kaleidescape Cinema One](#) is a sleek, white, rectangular unit with a black top surface. A black remote control with a grid of buttons and the Kaleidescape logo is resting on top of the device. The front of the device features a small, illuminated blue logo and a power button. The device is shown from a three-quarter perspective, highlighting its compact and modern design.
