URC announces Custom Device Layouts at ISE 2020-- an addition to the Total Control automation and control system allowing installers to customise the user interface for each device.

Using Accelerator 2.0 software, installers can customise the landing page for each device with a modular button layout, combine features on one page of the UI, add live camera feeds and have favourite channels pop up windows for ease of use. Total Control 2.0 offers premium performance, highly customisable GUIs and robust 3rd party integration.

The Custom Device Layouts feature will be available from March 2020 as part of an Accelerator 2.0 update to authorised URC installers.
