---

ReQuest launches Maestro at CEDIA Expo 2011, an iDevice and Android control system for F3 systems (with MediaPlayer).

Maestro allows browsing, control and streaming of ReQuest music and movie collections through either iPad, iPhone or Android device touchscreens.

Users control playback through the built-in gesture based control-- and can quickly sort through their collections via live search bar, with full metadata support (including cover art and song titles).

It also supports portable useage-- streaming music and movie libraries via wifi or 3G support.
