URC demonstrates the MXW-920 at CEDIA 2011-- its first water-resistant remote.

It is a 1-way RF controller with a monochrome LCD display, with a design similar to the URC MX-900 and a IP-class 54 water resistance rating, withstanding "dust deposits" and "splashed water".

The URC MXW-920 is programmable in exactly the same way as the MX-900 or KP-900-- using the same 418MHz URC hubs.

At CEDIA 2011 URC will also introduce 3 new 1-way remotes, together with new Total Control products.
