Ahead of its official debut at IFA 2012 LG announces the TV2792 Personal Smart TV-- a 27-inch passive 3D display complete with IPS technology and LG Smart TV functionality.

The TV combines a number of connectivity options with SmartShare, allowing users to display files from laptops, smartphones and external HDDs via Mobile High-Definition Link (MHL) and Intel Wireless Display (WiDi). Further connectivity comes through DLNA, Wifi Direct, x3 USB and x2 HDMI ports.

Control comes via either mouse and keyboard or the motion and wheel controlled Magic Remote, providing easy access to VOD content and a variety of apps and online content.
