

OmniMount Adds to Interactive Mounts

OmniMount will introduce a new mount category at CES 2013-- the ActionMount PLAY interactive mounts, ideal for customers demanding expanded viewing angles and positions from their TVs.

The mount series includes single- and double-jointed arm mounts providing omni-directional display movement (lift, lower, expand, retract, rotate, pan) through only a light touch, the company claims.

So called "Ergotron Constant Force" technology counter-balances TV weight.

Meanwhile the LIFT series uses the same CF technology but in a lower profile design, with up to 45cm of vertical lift/lower and 10 degrees of lift with a 5cm profile.
