Datacolor will upgrade to its ColorFacts Professional colour calibration system, ColorFacts 7.5. ColorFacts 7.5 includes Spyder3’s advantages and offers a range of new features that enables developers or professionals installing high-end equipment at customer sites to measure and calibrate TV sets even more precisely.

The new Datacolor Spyder3 sensor’s measurement opening covers a surface of 372mm2, a 246% increase over its predecessor. With measurement accuracy increased by 29%, Spyder3 is currently the only colorimeter in its class that is equipped with seven colour detectors.
